Web_Dev_26

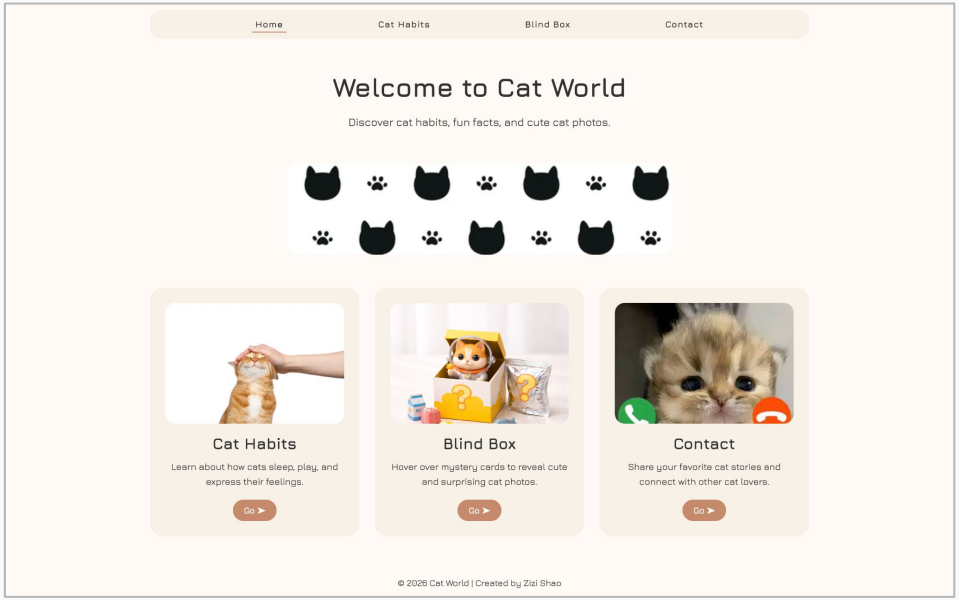
Midterm Project

Zizi Shao

Concept/Theme

- A playful and cat-themed website. I wanted to create a soft and welcoming space that introduces cats.

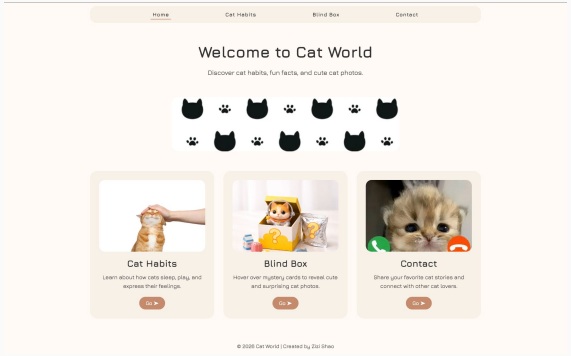
Project Overview

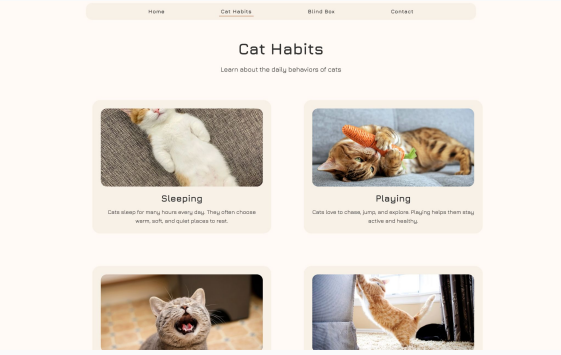


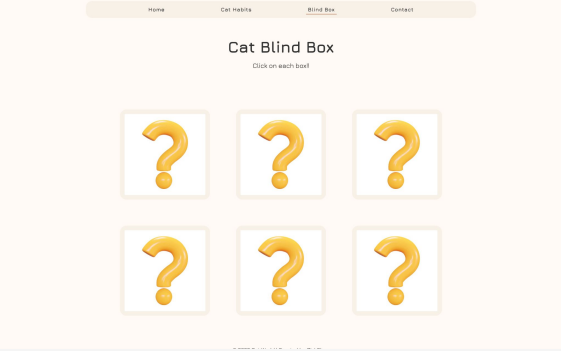
This website include 4 pages:

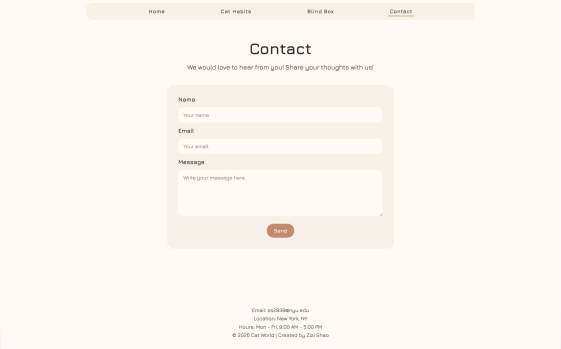
- Home page
- Cat habits page
- Blind Box page
- Contact page

Demo https://zizi-s.github.io/zz_s/Midterm/









Snippet of code I figured out: Blind Box Effect

1	**Opacity**	Two images in one blind-box card(cat & question mark). By default, question mark image appears first, cat image is hidden using opacity.
2	**Input**	When the input becomes checked, the question mark image disappears, cat image appears.
3	**Animation**	It tells the card to play the shakeBox animation. It controls the duration, and timing of the animation.
4	**Keyframes**	Used in animation. They tell the box how to move by rotating it and shifting it slightly to the left.

```css
.question-img {
  opacity: 1;
}

.cat-img {
  opacity: 0;
}

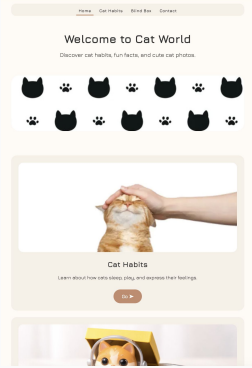
.blind-item input:checked + .blind-card .question-img {
  opacity: 0;
}

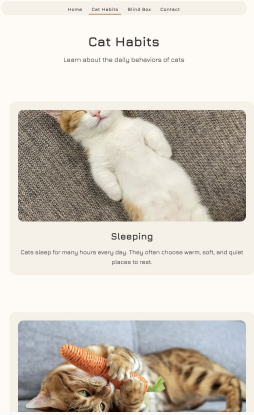
.blind-item input:checked + .blind-card .cat-img {
  opacity: 1;
}

.blind-item input:checked + .blind-card {
  animation: shakeBox 0.5s ease;
}

@keyframes shakeBox {
  0% { transform: rotate(0deg) translateX(0); }
  20% { transform: rotate(-5deg) translateX(-4px); }
  40% { transform: rotate(5deg) translateX(4px); }
  60% { transform: rotate(-4deg) translateX(-3px); }
  80% { transform: rotate(4deg) translateX(3px); }
  100% { transform: rotate(0deg) translateX(0); }
}
```

Media Query





- The blind box layout changed from **3 columns to 2 columns.**
- The habits page changed from **2 columns to a single column.**
- Home page changed from 3 **columns to a single column.**

Next step

CSS variables

Add multiple color themes using CSS variables, so I could change color theme easily.

Effect

Add background effects to decorate the site.

Card effect

Add hover effect to all cards.

Thank you
