Final Project Proposals

Concept/Theme

- Continue with my midterm cat-themed website.

Midterm version

- A cat-themed website built with HTML & CSS
- Included four pages: Home, Cat Habits, Blind Box, and Contact
- The Blind Box page included a simple reveal interaction using CSS

Final To-Do List/Outline:

1 **Upgraded Page: Blind Box**
Add click interaction, shake animation, sound effects, and random cat image reveal.

2 **New Feature: Theme Switcher**
Add a dark/light mode or different color themes.

3 **Upgraded UI: Animated Background**
- Add a simple animated background to make the site feel more dynamic.
- Add a subtle hover effect so each card slightly lifts upward when hovered.

4 **New Page: Cat Eating Habits**
Include information about safe and unsafe foods for cats.

5 **Interactive Feature: Mini Game (p5.js)**
Embed a feeding game on the Cat Eating Habits page with score and timer. Users need to move the cat to catch safe foods and avoid dangerous foods.

Thank you
